EDUCATION

B.Tech - Artificial Intelligence and Data Science

2021 – 2025

Thakur College of Engineering and Technology - **CGPA - 9.38**

Kandivali, Mumbai, India

HSC Board Examination

2020 – 2021

Sardar Vallabhbhai Patel Vidyalyaya - **Percentage - 84.83%**

Bhayandar, Mumbai, India

TECHNICAL SKILLS

Languages: Python, SQL, C++

Developer Tools: VS Code, MySQL, Jupyter Notebook, Git/Github, MS Office

Knowledge: OOPS Concept, DBMS, Machine Learning, Deep Learning, NLP.

Technologies/Frameworks: Django, Flask, Scikit-learn, Tensorflow, Tailwind CSS, LangChain.

EXPERIENCE

CodSoft

December 2023 – January 2024

Machine Learning Intern

Remote

- Built a Django web application to display real-time machine learning predictions, improving accessibility for users by 40%.
- Processed and analyzed datasets with 10,000+ rows, optimizing feature selection and reducing preprocessing time by 30%.
- Implemented supervised and unsupervised models with TensorFlow and Scikit-learn, achieving 95% classification accuracy and reducing prediction time by 20%.

PROJECTS

RecipePro.ai | Django, LangChain, Tailwind CSS, Google Generative AI (Gemini), Python

- Designed an AI-powered recipe generate system using Django, leveraging session management to enhance personalized recipe recommendations.
- Integrated Google Generative AI (Gemini) via LangChain to generate customized recipes, handling 50+ unique queries with 95% response accuracy.
- Optimized UI with Tailwind CSS and Django's static file handling, reducing load times to under 5 seconds and increasing user engagement by 30%.

CareerVision.ai | Django, SQLite3, Tailwind CSS, Deep Learning (MLP Classifier), Adzuna API

- Engineered an interactive career prediction platform with Django, processing 20,000+ data entries to generate job role suggestions.
- Implemented an MLP classifier achieving 80% accuracy, analyzing user inputs like skills and logical reasoning to predict suitable careers.
- Integrated SQLite3 to store 10+ learning roadmaps, dynamically mapping them to predicted job roles.
- Fetched and displayed 5+ real-time job and internship listings using the Adzuna API, enhancing career guidance for users.

StockVision | Python, Django, LSTM, Time Series, Data Visualization, Machine Learning

- Developed an end-to-end stock trend prediction system using LSTM, enabling accurate future trend forecasts.
- Optimized the cleaning and transformation of historical stock data from Yahoo Finance API, enhancing preprocessing efficiency by 20%.
- Deployed the LSTM model on a Django, ensuring real-time predictions with an intuitive interface.
- Integrated interactive visualizations, including candlestick charts and moving averages.
